PROFILE

Full-time software developer, full-time Computer Science student, always building something on the side. 2+ years shipping full-stack features at Revenue NSW, from TypeScript, Python and AWS work to REST APIs, 20M+ record SQL databases, a legacy service migration, and the test automation framework that now guards every weekly release. Outside the day job, still building full-stack applications, with a habit of shipping things that actually work, not just things that demo.

PROFESSIONAL EXPERIENCE

Junior Software Developer

February 2024 – Present

Revenue NSW (Full-time)

- Developed frontend interfaces backed by REST APIs and AWS services (Lambda, S3, DynamoDB, API Gateway), shipping features across the full stack in TypeScript, JavaScript and Python.
- Led the migration of a legacy Java Spring Boot file retrieval service (spanning 3 - 5 services) to Python, consolidating the codebase onto the team's primary backend stack and reducing long-term maintenance overhead.
- Built an end-to-end Python test automation framework covering the full data pipeline (entry, processing channels, and result validation) replacing hours of tedious of manual QA on every weekly release.
- Designed a record-matching solution that resolved data quality corruption affecting approximately 20% of a 20M+ record dataset, eliminating manual review at scale.
- Configured secure GitLab CI/CD pipelines for continuous integration and deployment, working across shared branches with the wider development team.

Property Manager

July 2025 – September 2026

Bluehill Real Estate (Part-time)

- Managed a residential property portfolio end-to-end: vacancy marketing, tenant onboarding, and tenancy record accuracy.
- Coordinated maintenance requests with tradespeople from request through to resolution, maintaining property standards and resident satisfaction.
- Acted as primary point of contact for owners and residents, ensuring ongoing lease compliance under NSW residential tenancy legislation.

Year 10–12 Mathematics Tutor

April 2024 – March 2025

Alchemy Tutoring (Online Platform, Part-time)

- Delivered one-to-one tutoring focused on building foundational understanding before introducing advanced challenges, equipping students with reliable problem-solving methods.
- Guided students to improve practice and in-school exam scores by an average of 15-25%.

PROJECTS

Portfolio Site

manav-preet-portfolio.vercel.app

- A real time 3D interactive portfolio built upon React, Typescript, three.js, React Three Fiber, Vite and Zustand. Built an asset pipeline compressing 174MB of models and textures to ~4MB, via WebP encoding, geometry simplification, and Draco compression. Architected a persistent WebGL canvas outside the router, so navigating the site eases the camera between scenes instead of re-rendering it.

Receiptify

[receiptify-store.vercel.app](#)

- AI receipt scanner · Next.js, TypeScript, Supabase Extracts line items from receipt photographs through an AI-powered OCR pipeline. Google OAuth authentication with per-account data isolation on a Supabase backend, taking the app from local demo to a persistent multi-user product.

Property Hub

[property-hub-demo.vercel.app](#)

- React, Next.js, TypeScript, PostgreSQL Tracks council rates, water bills, termite and periodic inspections, and maintenance tasks across a property portfolio, with time-sensitive notifications so nothing lapses past its due date. Integrates multiple external data sources into a single view. Built for a private company, however, public demo is available which runs on synthetic data

EDUCATION

Bachelor of Computer Science (Cybersecurity)

Expected 2027

University of Technology Sydney, Ultimo NSW

Industry Degree Academy Scholarship (IDeA) • Concentration: Cybersecurity

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, SQL
- **Cloud & Infrastructure:** AWS (Lambda, S3, DynamoDB, API Gateway, CodePipeline)
- **Frontend:** React, Next.js, three.js / React Three Fiber (WebGL), Vite
- **Backend & APIs:** RESTful API design and integration; service development in Python and Java Spring Boot, Supabase
- **Databases:** Large-scale SQL database management and query optimisation (20M+ records)
- **CI/CD & Version Control:** Git, GitLab, GitLab CI/CD, AWS CodePipeline
- **Automation:** Power Automate; Python-based end-to-end test automation and scripting

ADDITIONAL

- **Communication & Leadership:** 2+ years of Agile practice in a professional team environment; experience in team collaboration and leading initiatives.
- **Adaptability:** Rapid adoption of new technologies on the job, demonstrated through full-stack and backend work at Revenue NSW.
- **Languages:** Fluent in English and Hindi.
- **Love of challenge:** Always looking to increase my skills and the level of task I can undertake.
